

## *Speed control mode function V. 1.0*

### *Descriptions*

*This function controls the source of the speed commands depending by the state active and of the mode selection activated*

**Syntax:** `SpeedControlMode()`

**Input parameters:** `TSI_Out_Sel_Mode, STP_Out_Speed, STP_Out_Start, STP_Out_Dir.`

**Output parameters:** `SC_Out_Speed, SC_Out_Start, SC_Out_Dir`

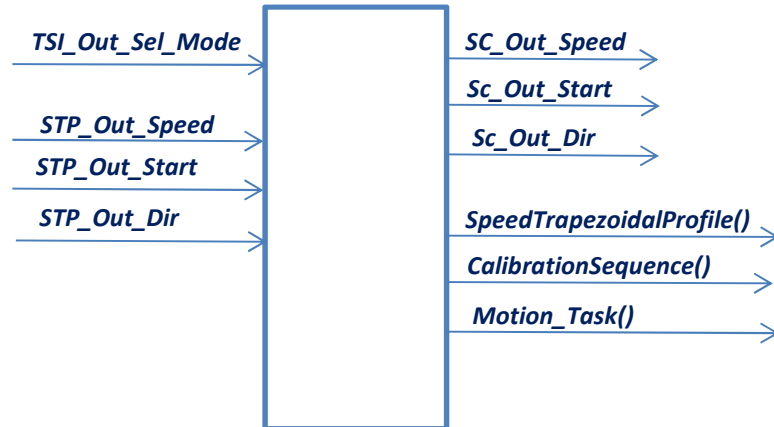

**Status:**

**Calls:** `SpeedTrapezoidalProfile(), Motion_Task(), CalibrationSequence()`

## Speed Control Mode function

### SpeedControlMode()

```
void SpeedControlMode()
{
  switch (TSI_Out_Sel_Mode)
  {
    case 0: { SpeedTrapezoidalProfile(); SC_Out_Speed = STP_Out_Speed; SC_Out_Start = STP_Out_Start; SC_Out_Dir = STP_Out_Dir;}
    break;
    case 1: { SpeedOnOffProfile(); SC_Out_Speed = SOOP_Out_Speed; SC_Out_Start = SOOP_Out_Start; SC_Out_Dir = SOOP_Out_Dir;
    CalibrationSequence();}
    break;
    case 2: { Motion_Task();}
    break;
    // Case 3 is for future gear mode function
    case 3: {}
    break;
  }
}
```
